Instructions for storage and cleaning

Please read over these instructions before use. If in doubt please consult your professional healthcare advisor.

Enteral ISO-Saf Home syringes are intended for use and re-use by one person and may be cleaned and re-used up to six times per day for no more than 14 days.

Traces of feed or medication that are allowed to dry and harden onto the syringe might not be removed by cleaning. For this reason, if a syringe is to be re-used then it must be cleaned immediately after use.

Precautions:

- Do not use the syringe if the plunger doesn’t move smoothly and easily into the barrel.
- Do not use the syringe if there is any visible damage to either the plunger or barrel.
- Discard the syringe if the dose markings on the side are no longer clear and easy to read.

Please consult your professional healthcare advisor for any local policies and protocols that may be in force.

1. Remove the syringe plunger from the syringe barrel. Wash both components thoroughly in hand-hot soapy water using washing up liquid. Pay particular attention to removing any trace of feed or medication from crevices or corners.

2. Rinse thoroughly under cold running tap water to remove all traces of the soapy water. Inspect each item carefully to confirm that all traces of feed or medication have been removed.

3. Shake any residual rinse water off the syringe components and then allow to air dry. Do not re-assemble wet components. Once dry, re-assemble the syringe and store in a clean dry container with a lid.

4. The syringe may be cleaned and re-used up to six times per day for no more than 14 days.
